

Welcome to TITAN

Welcome to your Assistant! This guide outlines the controls you can use to interact with the overlay and capture questions or code.

There are two ways to control the assistant: **Standard Hotkeys** and **Magic Sequences**.

1. Magic Sequences (Recommended)

Magic Sequences are the most reliable way to interact with the assistant. Simply type these characters anywhere (in any text box, editor, or window) at a normal typing speed. The assistant will detect the command, automatically delete the letters you just typed so they don't mess up your work, and execute the action.

Type This What It Does

<code>..c</code>	Capture Code: Scans the screen for coding questions.
<code>..m</code>	Capture MCQ: Scans the screen for multiple-choice questions.
<code>..l</code>	Type Next Line: Automatically types the next line of the generated code for you.
<code>..h</code>	Toggle HUD: Shows or hides the assistant window.
<code>..t</code>	Toggle Stealth: Enters or exits stealth mode.
<code>..g</code>	Ghost Mode ON: Enables Ghost Mode.
<code>..s</code>	Ghost Mode OFF: Disables Ghost Mode.
<code>..q</code>	Quit: Safely closes the assistant completely.

Tip: If you type `..c`, the assistant will quickly hit backspace three times to remove `..c` and then begin capturing.

2. Standard Hotkeys

If you prefer traditional keyboard shortcuts, you can use the F-keys and Alt combinations below. *(Note: Depending on your keyboard or active software, some F-keys may conflict with system shortcuts. If they don't work, use the Magic Sequences above).*

Keyboard Shortcut What It Does

<code>F5</code>	Capture Code: Scans the screen for coding questions.
<code>Alt + Y</code>	Capture MCQ: Scans the screen for multiple-choice questions.
<code>F6</code>	Type Next Line: Automatically types the next line of the generated code.
<code>F2</code>	Toggle HUD: Shows or hides the assistant window.
<code>F3</code>	Toggle Stealth: Enters or exits stealth mode.
<code>F7</code>	Ghost Mode ON: Enables Ghost Mode.
<code>F8</code>	Ghost Mode OFF: Disables Ghost Mode.
<code>Alt + T</code>	Quit: Safely closes the assistant completely.

Getting Started: A Quick Example

1. Ensure the assistant is running in the background.
2. When a coding question is visible on your screen, simply type `..c`
3. Wait a moment for the assistant to process the question.
4. Once the answer is ready, place your cursor where you want to write the code and type `..l` (or press `F6`) repeatedly to type out the solution line-by-line.
